

Installation instructions for Java-based mobile devices:

Please read the installation instructions carefully before starting the installation.

System requirements:

A JAVA-based device supporting **JAVA-MIDlets** according to the MIDP 2.0, CLDC 1.1 specification.

Due to the large number of available models, we cannot provide a complete list of supported devices.

Installation steps:

- Download the file **MEG.zip** onto your PC and then extract the files **meg.jar** and **meg.jad**.
- Check there is enough memory available on your mobile or pocket PC to support the program. Free memory required: **between 6 MB and 8 MB**.
- 1) Copy the files **meg.jar**, **meg.jad** onto your mobile device.
- 2) After the transfer you will find the **meg.jar** file in the Message Inbox or in the File Download folder, depending on the device model.
- 3) Selecting this file will install the application on your device.
- 4) Follow your device manufacturer's instructions.

First operation of the Mobile Information Software:

- Look for the item "eInfo Mobile" in the Start menu of your device (item "Programs").
- After actuating this program symbol the Start menu of M.E.G Programs will appear.
- You can now use the Mobile Information Software.
