

Installation instructions for Windows Mobile based mobile devices:

Please read the installation instructions carefully before starting the installation.

System requirements:

Windows 98, ME, 2000, XP: Windows PC with Microsoft ActiveSync-Software.

Windows Vista: PC with an installed "Windows Mobile Device Center". You can find information on the Device Center under Windows Help.

Installation steps:

- Download the file **meg.cab** onto your PC
- Check there is enough memory available on your pocket PC to support the program. The amount of free memory needed for the program is between **6 MB** and **10 MB**.

- 1) Copy the file **meg.cab** onto your mobile device.
- 2) Use the Windows Explorer of your mobile device to view the directory into which you copied the **meg.cab** file.
- 3) Choose the file **meg.cab** for the installation.
- 4) Follow the instructions for the installation procedure.

First operation of the Mobile Information Software:

- Look for the item "**eInfo Mobile**" via the Start menu of your mobile device (item "Programs").
- After actuating this program symbol the Start menu of the M.E.G programs will appear.
- You can now use the Mobile Information Software.
